Summary

Recent MFA graduate specializing in character rigging and technical animation, focused on production-ready deformation systems, rigging workflows and real-time pipelines. Experienced across animation, modeling and pipeline collaboration in academic and studio environments.

Skills

Rigging and Technical Animation: Character Rigging, Skinning, Blendshapes, Deformation Systems, Animation Workflows

Software: Maya, Blender, Unreal Engine

Experience

Teaching Assistant, *National Taiwan University of Art*, Taiwan September 2022 - June 2024

- Assisted in delivering undergraduate courses in foundational and intermediate 3D animation.
- Guided students in animation workflows, software operation and production practices.

Animation Intern, *CGCG Inc.*, Taiwan July 2022 - August 2022

- Developed foundational character animation skills through the application of body mechanics, posing, timing, constraints and performance principles.

3D Generalist, *Image Infinitely Co, Ltd. (i-two)*, Taiwan September 2021 - June 2022

- Responsible for creating production-ready 3D characters and assets across modeling, texturing, rigging and animation workflows.
- Collaborated across multidisciplinary CG pipelines for visual production.

Compositing Intern, *Moonshine Studio*, Taiwan March 2021 - April 2021

- Assisted in the production of "Gold Leaf" (2021 Taiwanese period drama) by performing rotoscoping and paint work to correct visual issues in cinematic shots.

Education

National Taiwan University of Arts, Taiwan September 2022 - January 2026
Master of Fine Arts (MFA), Animation Art

Shih Hsin University, Taiwan September 2017 - June 2021
Bachelor of Design (BDes), Animation Design

Research & Presentation

The Creation of 3D Computer Animation "Soar Buddies" 24 April 2026

- Presented at The 2026 Taipei International Conference on Animation and New Media "Morphing Dimensions", Taiwan.
- Postgraduate thesis research on the production of the 3D animated short film "Soar Buddies", highlighting project development, production workflows and creative decision-making throughout a 17-month production cycle (July 2024–December 2025).
